

3042 - Audience Summary

This course is for students who have entry-level experience in managing computer networks. This course does not require that you have occupational experience with Novell products ; however, it does assume you have some prior knowledge of NetWare 6.5

3042 - Course Prerequisites

To take this course, you must first understand the following:

Novell networking (available in Course 3016)
The terminology, hardware and practices—including routers, hubs, switches, backbones and subnets—commonly used in enterprise networks

3042 - Course Outline

This course covers a broad range of topics, many of which are listed below:

Managing client software on a NetWare 6.5 network
Building a TCP/IP network using NetWare 6.5
Managing NetWare 6.5 servers
Using Remote Manager, iManager 2.0 and iMonitor
Managing NetWare 6.5 encryption
Optimizing eDirectory performance
Managing Novell licensing
Managing the NSS file system
Managing NetWare 6.5 Web and application services
Installing and managing Apache Web server
Documenting the network
Troubleshooting the network
Upgrading to NetWare 6.5

3042 - Course Testing Information

This course prepares you to take the Certified Novell EngineerSM (CNE) and Certified Novell InstructorSM (CNISM) certification exams. As with all Novell certifications, coursework is never required. You will only need to pass the Novell CNE (050-690) or CNI (050-890) exam to achieve certification.
