

### **3043 - Audience Summary**

This course is for students who are seeking Novell Certified Engineer (CNE) or Certified Novell Instructor (CNI) certification. The ideal student will have advanced skills in server management and previous administrative experience with NetWare.

### **3043 - Course Prerequisites**

Before taking this course, you must have experience in NetWare administration. Depending on your level of experience, the following courses are strongly recommended:

*Foundations of Novell Networking: NetWare 6.5 (Course 3016)*  
*Novell Network Administration: NetWare 6.5 (Course 3042)*

### **3043 - Course Outline**

This course covers a broad range of topics, many of which are listed below:

- Migrating to NetWare 6.5
- Consolidating servers
- Installing the NetWare Server Consolidation Utility
- Troubleshooting network, server and eDirectory performance
- Managing server storage
- Expanding an NSS storage space
- Resolving common NSS errors
- Implementing advanced storage services
- Implementing pool snapshot and versioning
- Implementing RAID
- Configuring partition mirroring and duplexing in NSS
- Implementing iSCSI
- Deploying DirXML
- Deploying Novell Branch Office

### **3043 - Course Testing Information**

This course prepares you to take the Certified Novell Engineer<sup>SM</sup> (CNE) and Certified Novell Instructor (CNI) certification exams. As with all Novell certifications, coursework is never required. You only need to pass the Novell CNE (050-691) or CNI (050-891) exam to achieve the certification.
